Not illustrated. 1900 Excerpt: . . . and this part of the retina bodily removed, the depression amounting to 2 D. The bullet was located with great exactness in the left orbit almost in contact with the posterior and nasal sides. A number of very beautiful skiagrams taken by Dr. Mackenzie Davidson were shown illustrating this. Mr. Ogilvie concluded by showing and calling attention to the comparatively small amount of damage done by the bullet in its passage through one orbit to the other. CHICAGO OPHTHALMOLOGICAL AND OTOLOGICAL SOCIETY. A regular meeting was held May 8th, with Dr. Wescott in the chair. . Dr. Richard S. Pattillo reported two cases of congenital abnormalities. Father, aged 33; mother, aged 33. Both healthy. No history or evidence of syphilis present. They have never had any trouble with their eyes; vision normal. The only point of interest is that they are second cousins. The have three children, two of whom are present. The second, a girl, aged 7, has quite prominent eyes, very large, with irises and corneas clear; vision 2030 in both eyes. John C. , aged 8. At birth the corneae were grayish white, so that the pupils could not be seen. When he was three weeks old they could be dimly made out, and at six weeks the right cornea became normal, but the eye was much enlarged. In about three months the left cornea became clear. When he was 3 years of age the right became blood red and remained in this...
